

VPFP International Cautious Fund

Investment Objectives

A diversified portfolio, consisting of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes, which invests into a wide range of asset classes including cash, fixed income, equities, and property. The portfolio aims to provide a balance between capital preservation and capital growth over the full investment cycle. The Cell is ideally suited to investors with a medium risk tolerance with an investment horizon of 3 years or longer.

Market Commentary

World markets rallied substantially during March on improving global economic conditions. The MSCI AC World Index gained 6.73% with Developed Markets increasing 6.24% and Emerging Markets increasing 6.39%.

US unemployment remained at 9.7% (below expectations for an increase to 9.8%). Employment levels are beginning to improve, however remain in negative territory. Retail activity in the US saw better than expected growth which is encouraging, and consumer confidence picked up slightly more than expected in March but remains well below the long-term mean. Rising consumer confidence, however, translates into consumer spending, which could boost the US economic recovery. The US leading economic indicator continued to rise, albeit in very low increments.

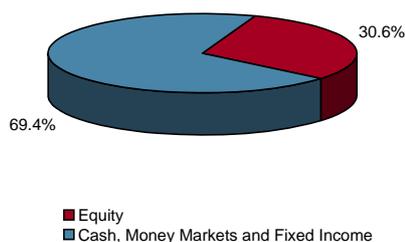

Concerns over Greek sovereign default began to ease as the Euro Zone and IMF jointly pledged loans to support the country's debt issues, in a package said to be worth €20 - 22bn. Fears around the resolution remain, however, as the package is likely to come with stringent conditions.

The US dollar strengthened slightly by 0.9% against the euro during the month amid remaining concerns over Greece's debt problems. The US dollar strengthened significantly against the Japanese yen with many investors having a negative view on the yen in the short-term. Against emerging market currencies, the US dollar continued to weaken (0.13% against the Brazilian Real, 0.01% against the Chinese yuan and 2.4% against the Indian rupee).

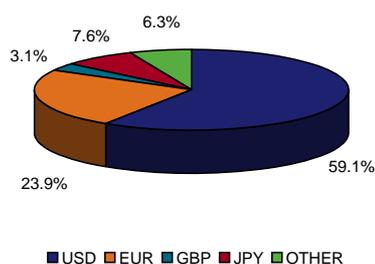

We remain underweight international bond exposure, and marginally increased international equity exposure.

Risk Warnings

- Collective investments are generally medium to long term investments. The value of units may go down as well as up, and past performance is not necessarily a guide to the future.
- Collective investments are traded at ruling prices. Commission and incentives may be paid and, if so, would be included in the overall costs. All performance is calculated Total Return, Net of all fees and commissions and in US Dollar terms. Weekly Forward pricing is used.
- A fund of fund collective investment scheme only invests in other collective investments, which levy their own charges.
- Fluctuations in the value of the underlying funds and the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.
- Deductions of charges and expenses mean that you may not get back the amount you invested.
- The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.
- Higher risk investments may be subject to sudden and large falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.
- Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the Fund will achieve its stated objectives.
- The Fund may contain shares or units in underlying funds that invest internationally. The value of your investment and the income arising from it may therefore be subject to exchange rate fluctuations.
- The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.
- Certain unregulated Collective Investment Schemes may permit a greater degree of leverage than is permitted with investment funds that are available to the general public in South Africa. Such Collective Investment Schemes have a greater underlying volatility, which increases the risk of loss.
- Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.

Important Notes

This Report should be read in conjunction with the Prospectus of RMBIS Mutual Fund ICC Limited and the Fund Supplement, in which all the current fees and expenses charged to the Fund are disclosed. Copies of these Scheme Particulars are available upon request from RMB Investment Services Limited, La Plaiderie House, La Plaiderie, St Peter Port, Guernsey, GY1 1WF.
