

VPFP International Cautious Fund

Investment Objectives

A diversified portfolio, consisting of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes, which invests into a wide range of asset classes including cash, fixed income, equities, and property. The portfolio aims to provide a balance between capital preservation and capital growth over the full investment cycle. The Cell is ideally suited to investors with a medium risk tolerance with an investment horizon of 3 years or longer.

Market Commentary

April was a positive month for global markets. The MSCI AC World Index returned 4.1% as developed markets outperformed emerging markets, rising 4.3% while emerging markets returned 3.1%. The JPMorgan Global Bond Index gained 3.1%.

The US welcomed a decrease in unemployment to 8.8% as non-farm payrolls jumped more than the market anticipated. CPI data revealed a further tick up to 2.7% (above the FED target range of 1.75% to 2%). After an upward revision in Q4 2010, US GDP grew a disappointing 1.8% in Q1 2011. The Q1 2011 Earnings Season was mostly positive, with several surprises on the upside.

In Europe, the ECB has commenced its fight against rising inflation, raising interest rates for the first time since 2008. The latest CPI estimate was reported at 2.8% (it continues to rise above the ECB target of 2.0%).

In the UK, GDP rose 1.8% after an unexpected drop in Q4 2010. CPI rose 4.0%, a slight decline from the previous month, however still well above the BoE's target of 2.0%.

While inflation in the UK and US remain high, these governments maintain an accommodative monetary policy, awaiting evidence of a sustained economic recovery.

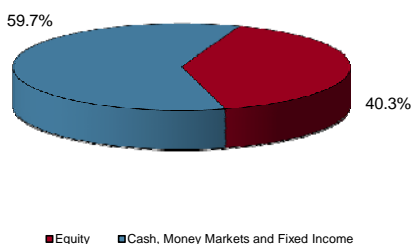

In China, inflation reached 5.4% in April (PBOC targets 3.0%). Consequently the PBOC raised rates a further 25bps and increased the banks' reserve requirement ratio an additional 50bps, to 20.5%. GDP growth remains robust, increasing more than expected by 9.7% in Q1 2011.

Inflationary pressures are now clearly on the upside and need to be monitored closely.

Given the rising inflationary pressure worldwide, we remain overweight equities and underweight fixed rate government bonds. We have increased exposure to global inflation-linked bonds, and continue to monitor this position.

Risk Warnings

- Collective investments are generally medium to long term investments. The value of units may go down as well as up, and past performance is not necessarily a guide to the future.
- Collective investments are traded at ruling prices. Commission and incentives may be paid and, if so, would be included in the overall costs. All performance is calculated Total Return, Net of all fees and commissions and in US Dollar terms. Weekly Forward pricing is used.
- A fund of fund collective investment scheme only invests in other collective investments, which levy their own charges.
- Fluctuations in the value of the underlying funds and the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.
- Deductions of charges and expenses mean that you may not get back the amount you invested.
- The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.
- Higher risk investments may be subject to sudden and large falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.
- Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the Fund will achieve its stated objectives.
- The Fund may contain shares or units in underlying funds that invest internationally. The value of your investment and the income arising from it may therefore be subject to exchange rate fluctuations.
- The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.
- Certain unregulated Collective Investment Schemes may permit a greater degree of leverage than is permitted with investment funds that are available to the general public in South Africa. Such Collective Investment Schemes have a greater underlying volatility, which increases the risk of loss.
- Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.

Important Notes

This Report should be read in conjunction with the Prospectus of RMBIS Mutual Fund ICC Limited and the Fund Supplement, in which all the current fees and expenses charged to the Fund are disclosed. Copies of these Scheme Particulars are available upon request from RMB Investment Services Limited, La Plaiderie House, La Plaiderie, St Peter Port, Guernsey, GY1 1WF.
