

VFPF CPI PLUS 6 Fund of Funds

MONTHLY FEEDBACK - 31 May 2009

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by six percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 60% and a maximum of 75% in equity exposure.

Portfolio Manager

Celtis Capital - Tom Barlow

Portfolio Comments

Global equity markets continued to perform positively during the month as some economic data indicated the flood of global liquidity is taking effect. The MSCI World Index achieved a positive return of 9.01% for the month. The global bond markets returned a marginally negative return (JP Morgan Global Bond Index down 0.98%). Emerging markets again outperformed with the MSCI Emerging Markets Index returning 15.47% for the month as proof that global risk appetite is improving. Global commodity prices also increased during the month on the back of improved economic data particularly from Chinese manufacturing sector. The Rand continued to show strength appreciating a further 6% over the month despite confirmation that SA is in its first recession for over a decade. The JSE All Share Index rallied along with other emerging markets and achieved a positive return of 14% for the month primarily driven by the Resource Index. The All Bond index returned a marginally negative 0.35%.

While we are encouraged by the improved international economic data and have increased the equity holdings over the month to a more neutral position, we remain reluctant to further increase the risk of the portfolios materially at this time. Our domestic concerns relate to the impact of an ever increasing Rand against major currencies and the potential impact this may have on the domestic export industries.

Investment Performance as at 31 May 2009

Portfolio Data

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from RMB Unit Trusts Limited ("the Manager"). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending 31 May 2009, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The Performance Fee Frequently Asked Questions document is available on the website (www.rmbam.co.za). The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period from 01 April 2008 to 31 March 2009 each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. This report has been prepared and is made available for the benefit of RMB Asset Management clients and accredited financial advisors. The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever. Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of RMB Asset Management's products. All references to companies and securities are only included for the purposes of illustration.
