

VPFP CPI Plus 2 Fund of Funds

MONTHLY FEEDBACK - 30 September 2011

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by two percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 20% and a maximum of 30% in equity exposure.

Portfolio Manager

Celtis Capital - Tom Barlow

Portfolio Comments

Fear and risk aversion worsened in September leading to a further 9.44% drop in the MSCI All Country World Index, led by a 14.58% loss in Emerging Markets and an 8.64% fall in Developed Markets. Global bonds lost 1.95%. While the US FOMC was widely expected to embark on another round of quantitative easing, instead it announced the launch of "Operation Twist", in which it would sell \$400bn worth of shorter dated Treasuries in favour of long term securities in an attempt to lower long-term borrowing rates. This buoyed long-dated US treasuries, but investors were disappointed, as fears over the struggling US economy were stoked. The JSE All Share lost 4.29% with Resources declining 5.30%, Industrials down 2.79% and Financials dropping 3.46%. Local bonds reversed gains, losing 2.09%. Foreign investors have been withdrawing funds after a prolonged period of strong inflows, as risk aversion increases. By the same token, the rand retreated further, weakening a material 15.70% to the US dollar. In local data, CPI remained at 5.30%, below expectations for a further increase. However, PPI rose substantially ahead of expectations to 9.6% with increases across most components of the basket. The SARB kept rates on hold once again, as expected, highlighting increased downside risks to the growth outlook mainly due to the increasing uncertainties in advanced economies. Risks to the inflation outlook have however been compounded by rand weakness. We added further to our international equity position as this asset class continues to offer the greatest value. We maintain a neutral to slightly overweight domestic equity position and underweight bond position, both locally and internationally, favoring inflation-linked bonds in this space.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from Momentum Collective Investments ("the Manager"). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending 30 September 2011, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period 01 July 2010 to 30 June 2011 each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever. Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of Momentum Collective Investments products. All references to companies and securities are only included for the purposes of illustration.
