

Ampersand Momentum CPI Plus 4 FoF

MONTHLY FEEDBACK - 31 March 2013

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by four percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in South Africa. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 40% and a maximum of 50% in equity exposure.

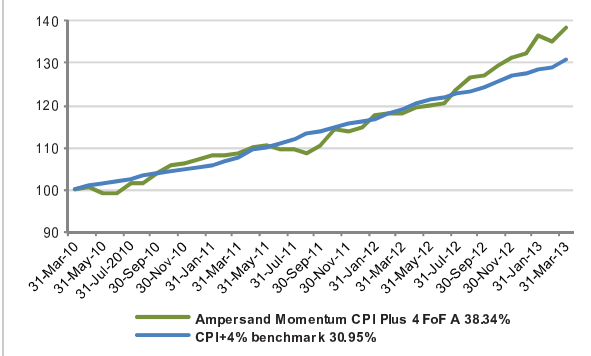

Portfolio Manager

Tom Barlow

Portfolio Comments

The global macro environment again dominated the local market performance on the back of continued central bank stimulus and investor risk appetite. Risk assets performed reasonably well during March, recouping most, if not all of the losses suffered in February. This was however not the case for the SA rand or SA Resources which remained under pressure. The local equity market generated 1.19% but it was very much a two-tier market. This was on the back of strong performance coming from Industrials (up 3.31%) and Financials (3.10%) while Resources (down 2.64%) remained under pressure on the back of long term economic fears and general pessimism toward the sector. The interest rate environment remained benign with rates remaining at all-time lows. Government bonds were under slight pressure due to rand weakness which pushed yields higher at certain durations. The total effect was however muted and bonds (BEASSA ALBI) still generated positive returns (up 0.18%). The biggest gainer in the fixed income space remained listed property which continued its phenomenal run (with the J253 ending 3.28% higher for the month of March). As mentioned earlier the rand remained under pressure, losing 2.25% versus the US dollar – this supported our offshore positions which also performed well in hard currency terms. The global equity market generated 4.60% and the global bond market generated 3.20% in rand terms. We remain cautiously optimistic, and maintain our overweight offshore equity position, while being marginally underweight local equity, underweight bonds and overweight income-enhancing strategies.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. All CIS are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available on request from the Momentum Collective Investments Limited. Commission may be paid and if so, would be included in the overall costs. A fund of fund portfolio is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Momentum Collective Investments Limited reserves the right to close and reopen certain portfolios from time to time in order to manage them more efficiently. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Different classes of participatory interests apply to certain portfolios, which are subject to different fees and charges. Momentum Collective Investments Limited's portfolios are valued daily at 08h30. Instructions must reach Momentum Collective Investments Limited before 14h00 to ensure same day value. Performance figures quoted are from Morningstar, as at the date of this factsheet for a lump sum investment, using NAV-NAV prices with income distributions reinvested. For the period from 01 January 2012 to 31 December 2012 the Total Expense Ratio (TER) is the percentage of the average Net Asset Value (NAV) of the portfolio incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Momentum Collective Investments Limited is the Manager of the Momentum Collective Investments Scheme, and a full member of the Association for Savings and Investment SA. The Standard Bank of South Africa Limited (PO Box 54, Cape Town, 8000) is the Trustee of Momentum Collective Investments Scheme. Although reasonable steps have been taken to ensure the validity and accuracy of the information in this document, Momentum Collective Investments Limited does not accept any responsibility for any claim, damages, loss or expense, howsoever arising, out of or in connection with the information in this document, whether by a client, investor or intermediary.
