

VFPF CPI PLUS 6 Fund of Funds

MONTHLY FEEDBACK - 31 January 2011

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by six percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 60% and a maximum of 75% in equity exposure.

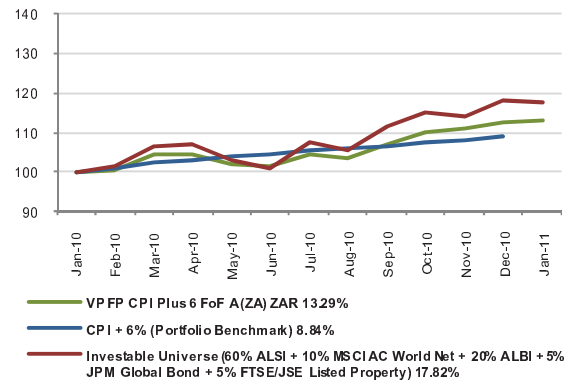

Portfolio Manager

Celtis Capital - Tom Barlow

Portfolio Comments

Emerging Markets failed to maintain their upward trend and declined 2.71% in the first month of 2011. Nevertheless the MSCI AC World Index was held up by Developed Markets which extended gains by 2.26%, thereby returning 1.57%. Global Bonds ended the month flat. Inflation is on the rise with Europe, China and the UK now reporting CPI above their respective target bands. US unemployment declined favourably to 9.4% but remains the largest risk to an economic recovery. While Chinese inflation fell, it remains well above the target range, and subsequently the PBOC raised the reserve requirement ratio by another 50bps, to 19.5%. Chinese GDP rose unexpectedly by 9.8% in Q4, locking in China's position as the second largest economy in the world. Local equities lost 2.24% with Industrials leading the downturn by a significant 6.15%. Bonds gave up 2.14% as the SARB increased US dollar reserves on the back of continued rand strength into year-end. Consequently, the rand has reversed its appreciating trend to end the month 8.4% weaker. Also contributing to bond and rand weakness has been the marked change in the direction of foreign demand for local bonds since October 2010. There were net outflows of R10bn in January. SA CPI and PPI both declined in January. The SARB kept interest rates on hold as expected. Upside inflation risks are however emerging in the form of higher food and energy prices. In the local portfolios we further increased offshore exposure. We maintain our view that offshore equities offer the greatest value and upside potential at present. We anticipate positioning the portfolios, both locally and internationally, for a higher inflationary environment.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from RMB Unit Trusts Limited ("the Manager"). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending **31 January 2011**, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The Performance Fee Frequently Asked Questions document is available on the website (www.rmbam.co.za). The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period from **01 January 2010 to 31 December 2010** each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. This report has been prepared and is made available for the benefit of RMB Asset Management clients and accredited financial advisors. The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever. Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of RMB Asset Management's products. All references to companies and securities are only included for the purposes of illustration.
