

VPFP CPI PLUS 6 Fund of Funds

MONTHLY FEEDBACK - 30 April 2012

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by six percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 60% and a maximum of 75% in equity exposure.

Portfolio Manager

Tom Barlow

Portfolio Comments

The offshore market ended lower this month as investors adopted a cautious approach amid a mixed bag of economic data as renewed concerns over Europe offset the Bank of Japan's announcement of a fresh 10-trillion-yen easing plan, in the wake of a downgrade of Spanish debt. Global markets slid 1.39%, with Developed and Emerging markets losing 1.37% and 1.48% respectively. Global bonds added 1.48%. Spain's 10 year bond yield peaked above 6.00% after the S&P cut its credit rating to BBB. Italy's 10 year bond yield also rose sharply to 5.75% as the country struggles to maintain recently introduced austerity measures. Germany's 10 year bond yield sank to 1.64% on safe-haven demand. The IMF revised their global growth forecasts for 2012 up for most major economies. However first quarter growth has been somewhat disappointing thus far, with US GDP up 2.2%, China growing 8.1% and UK stagnant with 0% growth. Unemployment in the EU rose to a record high of 10.8%. The US economy added 120 000 jobs as unemployment dropped to 8.2%. Domestic equities performed well posting a return of 2.52% led by a rise in Resources of 2.25%, while Financials added 1.98% and Industrials grew 0.96%. CPI declined to 6.00%, in line with expectations. The Rand weakened by 1.36% against the US dollar. Local bonds added 1.83% after Citigroup announced the possible inclusion of South African Government Bonds in its World Government Bond Index. We remain cautious in an environment of rising uncertainty. Offshore equity remains our largest overweight position and we maintain our underweight position in Government fixed interest, both local and offshore.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from Momentum Collective Investments ("the Manager"). Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending **30 April 2012**, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period 01 January 2011 to 31 December 2011 each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. **The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever.** Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of Momentum Collective Investments products. All references to companies and securities are only included for the purposes of illustration.
