

VPFP CPI PLUS 6 Fund of Funds

MONTHLY FEEDBACK - 31 August 2012

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by six percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 60% and a maximum of 75% in equity exposure.

Portfolio Manager

Tom Barlow

Portfolio Comments

Global equity markets gained 4.83% while global bonds returned 3.37% in rand terms, enhanced by a further weakening of the rand to the US dollar, of 1.54%. Investors anticipate further stimulus from China, as Chinese CPI dipped to 1.80% and concerns around growth escalate. EU and UK CPI remain sticky above their inflation target of 2%, while the US saw an unexpected drop in CPI to 1.40%. The FED was largely expected to announce QE3 at its Jackson Hole meeting on 31 August. Although further easing was not explicitly announced, markets took comfort on comments from Bernanke that the Fed was prepared to take further stimulus action if necessary. The EU dipped into recession in the second quarter, in line with consensus. The ECB is widely expected to resume its easing policy when they meet on 6 September. The All Share Index continued its expansion to new record highs over the month, closing 2.94% up. Listed property led gains, returning 5.65%, followed by financial stocks which added 2.39%. Industrials gained a mere 0.23%, while the clear loser remained Resources, trailing 0.86%. Local Bonds were flat as our bond market saw some reversal of foreign inflows in recent weeks. Local CPI surprised to the downside, rising 4.90% versus the forecast 5.20%, igniting hopes for further interest rate cuts by the SARB either at its September meeting, or by the end of the year. Markets remain in vulnerable territory and it is becoming increasingly difficult to find solid value. Offshore equity still appears the best valued asset class at present, and we therefore remain slightly overweight. We maintain an underweight position in fixed interest. We seek to increase offshore exposure on rand strength. We believe that a more active investment approach, particularly in the area of instrument selection, will assist in adding value in these uncertain times.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from Momentum Collective Investments ("the Manager"). Commission may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending **31 August 2012**, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period 01 July 2011 to 30 June 2012 each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever. Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of Momentum Collective Investments products.
