

Ampersand Momentum CPI Plus 6 FoF

MONTHLY FEEDBACK - 31 December 2012

Portfolio Objective

The portfolio aims to generate positive returns over the short term while beating inflation by six percent over a three-year rolling period. The portfolio will be managed to achieve stable growth and will comply with the Prudential Investment Guidelines at all times.

Investable Universe of Portfolio

In order to achieve this objective, the assets normally included in the portfolio will consist of assets in liquid form and participatory interests of portfolios of collective investment schemes or other similar schemes in equity, bond, money or property markets, registered in the Republic of South Africa, or portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the manager and trustee of a sufficient standard to provide investor protection at least equivalent to that in the Republic. The portfolio will predominantly invest in multi-asset class portfolios and is not limited to certain asset classes. The manager will be permitted to invest on behalf of the portfolio in offshore investments as permitted by legislation. The portfolio will aim to achieve a minimum of 60% and a maximum of 75% in equity exposure.

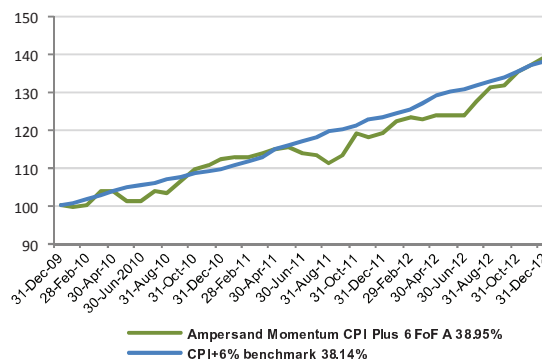

Portfolio Manager

Tom Barlow

Portfolio Comments

Global equity markets were down 3.11% in rand terms this month mostly contributed by a strengthening of the rand to the US dollar, of 5.28%. Global bonds were down 5.23%. Market reaction appeared somewhat muted despite the impending fiscal cliff headwind showing that Obama and the Congress would negotiate and have no vested interest in throwing the US back into recession. Although the impending U.S. fiscal deal sets the stage for further budget confrontations in the coming months, the fiscal drag for 2013 will be less than the 4% of GDP that was forecasted if no deal was to be reached. This suggests that the U.S. economy should avoid a recession in 2013 especially since the Fed announced QE4 as expected during the December Federal Open Market Committee (FOMC) meeting. It however surprised markets by announcing rates will stay low as long as the unemployment rate is above 6.5% and inflation is below 2.5%. On the Japanese front, newly elected Prime Minister Shinzo Abe has put intense pressure on the Bank of Japan to further ease monetary policy. The All Share Index continued its expansion to new record highs over the month, closing 3.51% up. Financials led gains, returning 5.72%, followed by resources which added 3.46%. Industrials gained 2.64%, while property trailed behind with 0.77%. Local Bonds returned 2.30%. SA's trade deficit narrowed to R7.94bn from record levels seen the previous month as imports of vehicles and aircraft dropped and labour unrest ebbed, allowing mining exports to tick up. Against this backdrop of pro-growth policies, offshore equities look set to continue to outperform bond markets. Markets, however, remain in uncertain territory and we thus maintain a cautious approach. We remain marginally overweight in offshore equities and underweight in Fixed Interest. We believe that assuming a more active investment approach, particularly in the area of stock selection, will assist in adding value in these uncertain times.

DISCLAIMER

Collective Investment Schemes (CIS) in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Manager may borrow up to 10% of the market value of a portfolio to bridge insufficient liquidity. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, UST, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue. A schedule of fees and charges and maximum commissions is available on request from Momentum Collective Investments ("the Manager"). Commission may be paid and if so, would be included in the overall costs. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds Portfolio only invests in other portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios. Figures quoted are from Morningstar, for the period ending **31 December 2012**, for a [lump sum / monthly investment], using NAV-NAV prices with income distributions [reinvested / excluded]. The Manager reserves the right to close certain Portfolios from time to time in order to manage them more efficiently. Different classes of participatory interests apply to certain Portfolios, which are subject to different fees and charges. The TER of this class or portfolio will be higher than the quoted service charge of the manager. For the period 01 October 2011 to 30 September 2012 each TER is the annualized percent of the average Net Asset Value of the portfolio incurred as charges, levies and fees. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. Certain portfolios or classes include a Performance Fee in the service charge, which forms part of the TER. **The report is for information purposes only and is not to be viewed as an offer to purchase any specific product and is not to be construed as investment advice nor guidance in any form whatsoever.** Investors and clients are encouraged to obtain independent professional investment and taxation advice from appropriately accredited financial advisors before investing in any of Momentum Collective Investments products.
