

Fund Objective

The portfolio's primary objective is to provide outperformance of the SA Equity Market as measured by the CAPI over a rolling 5 year period while achieving this return at a lower risk.

Fund Strategy

The portfolio's investment universe consists of financially sound equity securities, preference shares, convertible bonds, property shares and property related securities listed on exchanges, and assets in liquid form. The portfolio's equity exposure will always exceed 80% of its net asset value. The Manager may also include unlisted forward currency, interest rate and exchange rate swap transactions for efficient portfolio management purposes.

Total Expense Ratio	1,57
Transaction Cost	0,50
Total Investment Charges	2,07
Performance Fee	—
TER Measurement Period	01 October 2017 - 30 September 2020

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product.

Performance fees are incentive fees earned by the manager for performance in excess of the benchmark. Performance fees form part of the cost structure of the fund and are included in the Total Expense Ratio. Please visit www.sanlamunitrusts.co.za for a detailed list of our funds that charge performance fees together with their calculation methodologies.

*The Ampersand Sanlam Collective Investments Equity Fund transitioned to Sanlam Collective Investments (RF) (Pty) Ltd on 01 July 2017.

Risk Profile

Aggressive

You can afford to take on a higher level of risk (ie, will have a greater exposure to equities in your portfolio) because of your investment time horizon or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive in five years or beyond.

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Collective Investment Schemes

Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Ampersand Asset Management (Pty) Ltd, (FSP) Licence No. 33676, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12- month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

As at 31 December 2020

Economic Market Overview

"Courage is the most important of all the virtues because without courage, you can't practice any other virtue consistently." **Maya Angelou**

Other than the events driven by Covid-19, Q4 2020 certainly provided us with some extraordinary political spectacles. As if to form a bridge between Covid-19 and the US election, Donald Trump announced on Twitter that he and Melania had tested positive on 2 October 2020. While his recovery was swift, the drama around the US election was anything but.

Stock markets are notoriously jittery around elections and again we saw world markets touch their quarterly lows at the end of October, days before the US election on 3 November 2020. Markets were not enjoying the rhetoric around a close election result and all this could mean for potential US social unrest. However, given the disparity of the preferred voting methodology adopted by Trump supporters (attendance of voting stations) versus Biden supporters (vote by post), it seemed clear early on in the vote counting process that a Biden victory seemed the most probable outcome. World markets liked the idea of a clear victory and immediately set off into positive territory.

Political commentary immediately shifted focus to the other side of the Atlantic where it seemed Brexit negotiations were heading for a disaster. That was until we got a timely Christmas present in the announcement of a "deal" on 24 December 2020 (although on closer inspection agreed terms leave a lot of openings for a continuation of this "drama").

So what of Covid-19? The good news - according to the NY Times (3 Jan 2021) there are 7 vaccines in limited early use and 3 FDA approved vaccines. This however needs to be read in the context of spiralling Covid-19 infections, increased lockdowns in large parts of the globe and extended timeframes to vaccinate a suitable percentage of the population to gain the much publicised "herd immunity". The start of 2021 remains uncertain.

Position going forward

Ampersand is pleased with the quarterly outcome of the portfolios, given the refinement of the risk and liquidity profiles within the specific investment products we manage. The bulk of the work is now complete with some minor adjustments to be made within certain asset classes to improve efficiency, liquidity and cost.

Over the duration of Q4 2020 we retained the consistency of our asset allocation. We used the select market movements to rebalance this asset allocation with particular reference to trimming the domestic property position as we saw material strength in this asset class.

We continue to closely monitor the events driving the ZAR but are comfortable with the funds' positions at present. We do not anticipate the need for any dramatic reallocations at this time.

Internationally we continued to re-allocate the equity asset class to roughly a 40% active and 60% passive exposure. We furthermore commenced implementing revised bond and property index exposures and are pleased with the initial enhanced certainty of performance outcomes and cost reduction we are seeing from these positions.

We believe it necessary to continue to demonstrate courage in our pursuit of sustainable returns through diversified and explainable asset class returns.
