Specific risks

The fund is a pure equity fund with a growth objective, suitable for long term investors with a high risk tolerance seeking correlation with local listed property. It is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

¹⁾Standard deviation – measures the volatility of fund returns ²⁾Sharpe ratio – fund return minus cash return (STeFI composite), divided by the Standard deviation (of fund returns)

Monthly Comment

Last year's volatile global equity market has continued into the first quarter of this year. The MSCI AC World Index gained 0.08% while global bonds lost -4.74% in rand terms. The rand strengthened and managed to end the month on much firmer ground, at R14.65/US\$. The US Federal Open Market Committee ("FOMC") left its target range for the federal funds rate unchanged. The FOMC noted that the US economy was expanding at a "moderate pace". Recent economic developments outside of the US have prompted the Federal Reserve to take a more cautious approach to raising interest rates in 2016. The unemployment rate increased to 5.0% from a previous 4.9%. Consumer inflation remained contained, easing to 1.0%. In South Africa, inflation accelerated and came in at a much higher than expected 7.0% y/y, after surging to 6.2% in January from 5.2% in December. The upward pressure came from higher food prices and higher transport costs. The South African Reserve Bank ("SARB") lowered its inflation forecasts marginally, now expecting inflation to average 6.60% in 2016 from 6.80% previously. The SARB Monetary Policy Committee raised interest rates by 25 basis points after hiking rates by 50 basis points in January. The SARB currently expects the economy to grow by a modest 0.8% in 2016. The deterioration of growth coupled with an increasing interest rate environment suggests that the economy is potentially heading for stagflation. SA Listed Property was the top performing asset class, gained 9.48%. We remain cautiously optimistic about the portfolios. Markets remain uncertain but our philosophy and investment approach has proven to be robust and effective in these challenging times. We urge investors to remain patient and committed to their chosen investment strategy.

The Total Expense Ratio (TER) is the percentage of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. A current TER may not necessarily be an accurate indication of future TER's. The disclosed TER is shown as an annual percentage based on data for the period from 01 November 2013 to 31 December 2015. The Transaction Costs (TC) is the percentage of the net asset value of the Financial Product incurred as costs relating to the buying and selling of the assets underlying the Financial Product. TC are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER. The disclosed TC is shown as an annual percentage based on data for the period from 01 November 2013 to 31 December 2015. The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC). The TER and TC have been calculated using historical actual and/or estimated data and are provided solely as an indication/guide as to the annual expenses/costs that could be incurred. These ratios do not represent any current/actual charges or fees.

Performance is calculated for a portfolio/portfolio class. Individual investor returns may differ as a result of fees, actual date(s) of investment, date(s) of reinvestment of income and withholding tax. Annualised returns, also known as Compound Annualised Growth Rates (CAGR), are calculated from cumulative returns; they provide an indication of the average annual return achieved from an investment that was held for the stated time period. Actual annual figures are available from the Manager on request. Performance figures quoted are from Morningstar, as at 31/03/2016, for a lump sum investment, using NAV-NAV prices with income distributions reinvested on the ex-dividend date. CPI/Inflation figures, where present, are lagged by one month.
